

# Prototype

This is the home page of my app. This will be the first page the user is going to see. From here the user may select the category in which their desired person falls or they could even search the name of the person.

The search option one of the few features I have in my application. Once the user types in a name it will display the name it searched and all the names that are related to it.

If the user selects the category it will display the names and their position in the institution and their number.
